

Coil Rack

The Strength of Simplicity

Storage system designed for coils.

- Time optimization in cable spooling.
- High bumping resistance.
- Space optimization.
- Easy to use, quick coil installation.
- Stock control at first sight.
- Individual and moveable axe supports, which prevent the coil from falling.

*We adapt the installation
to your needs.*

Esnova

TYPES:

We have two types of coil racks, trapezoidal and straight. Trapezoidal type with single connector is ideal for manual loads and low weight coils.

Trapezoidal type with double connector is designed for heavier coils and for rows of multiple bays.

Straight type allows to store a great number of heavy coils.

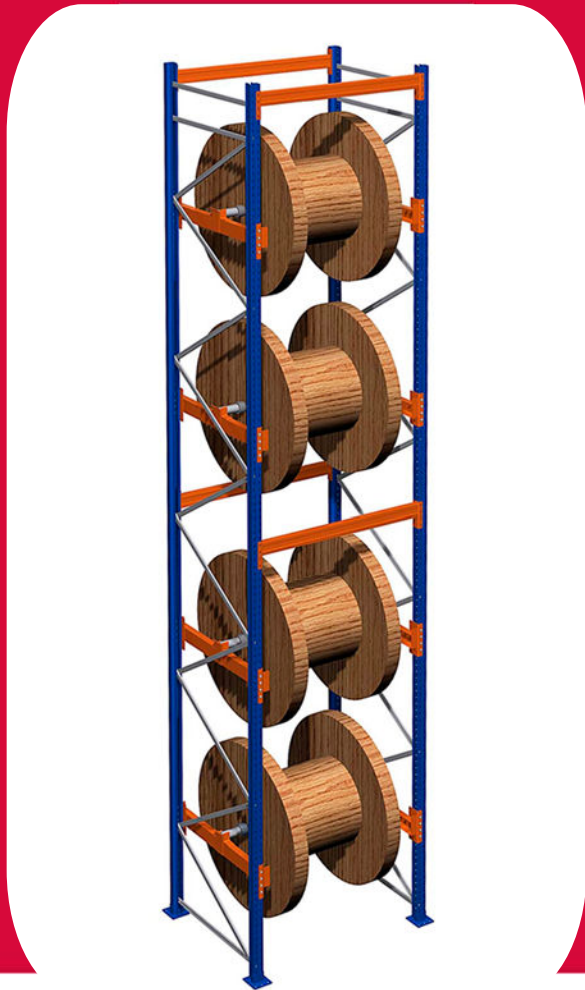

The selection of connectors (single or double) will depend on the number of bays.

Trapezoidal coil Rack

Straight coil Rack
